

Submitter: Judith Moore
Belvedere Montalto Ltd

The Montalto Stock Water Scheme was designed for and over 95% is used for livestock drinking water which does not require the proposed level of filtration. This means 5% has been hijacked for other uses which are causing today's grief.

The proposed costs for livestock farming are unsustainable. Financially we will have no option than to opt out of the scheme.

Plan B

The scheme reverts to stock water only

All houses install a 30,000L tank and have water from an approved source delivered by the tanker load on a user pay basis.

Plan C

Each property installs an approved filter for house supply.
